

What is Research?

Research is a process you can use to find out information about things you need to know.

We do this all the time, both at school and at home. (Remember the Pizza Process)

So how do we **research**?

- Think about what you already know. This is called **prior knowledge**
- **Decide** what you need to find out
- Write down some good questions to ask
- Identify some good words to use when you're searching
- **Decide** where will you look to **find** useful information
- **Evaluate** and **record** the information you find
- Use all the information to **present** your research to your teacher
- Reflect on your successes and challenges. **Evaluate** them. **Decide** what worked well that you will do again next time, what did not work well that you would change for next time
